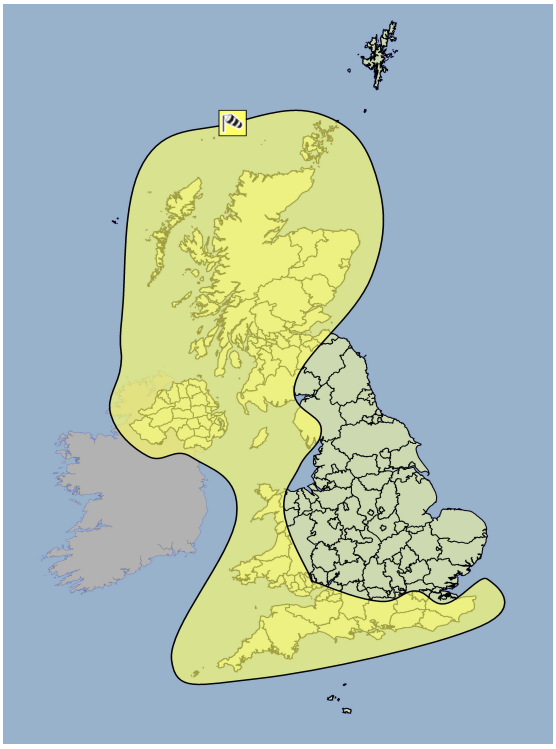
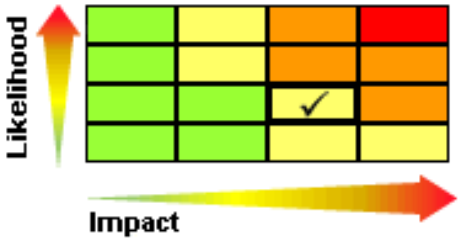
# National Severe Weather Warning Service





**Chief Forecasters Assessment**
An area of low pressure is expected to develop in the Atlantic on Sunday, deepening rapidly to pass just to the NW of the UK on Monday and into Tuesday. This will bring stormy conditions to the UK on Monday and Tuesday with the strongest winds likely along coastlines exposed to the south and west. Heavy rain is expected with this low pressure system and given recent wet conditions some flooding issues are possible.

With such a rapid development there remains some uncertainty around the precise depth and track of this system, and hence the areas most likely to be affected by the strongest winds and heavy rain. This alert is likely to be updated in the coming days.

The Met Office have issued a **Yellow Alert** of **Wind**

Valid from **06:00 on Mon, 23rd Dec 2013** until **12:00 on Tue, 24th Dec 2013**

A very deep area of low pressure will bring very strong winds and heavy rain to much of the UK from Monday morning, through to late Tuesday morning. There is the potential for widespread gales with gusts of 70 mph for much of Scotland, Northern Ireland, Wales, southern and northwest England. Gusts of 80-90 mph are possible, with the greatest likelihood of these values across west Scotland.

The public should be aware of the potential for significant disruption to travel due to the very strong winds and also the risk of some flooding issues thanks to the heavy rain.
